Geographic Data Science -Lecture III

(Geo-) Visualization

Dani Arribas-Bel

Today

- Visualization
 - What and why
 - History
 - Examples
- Geovisualization
 - What
 - "A map for everyone"
 - Dangers of geovisualization

Visualization

"Data graphics visually display measured quantities by means of the combined use of points, lines, a coordinate system, numbers, symbols, words, shading, and color."

The Visual Display of Quantitative Information. Edward R. Tufte.

Maps

Maps --> Data Maps (XVIIth.C.)

Maps --> Data Maps (XVIIth.C.) --> Time series (1786)

Maps --> Data Maps (XVIIth.C.) --> Time series (1786) --> Scatter plots

Maps --> Data Maps (XVIIth.C.) --> Time series (1786) --> Scatter plots

- Surprisingly recent: 1750-1800 approx. (much later than many other advances in math and stats!)
- William Playfair's "linear arithmetic": encode/replace numbers in tables into visual representations.
- Other relevant names throughout history: Lambert, Minard, Marey.

Visualization

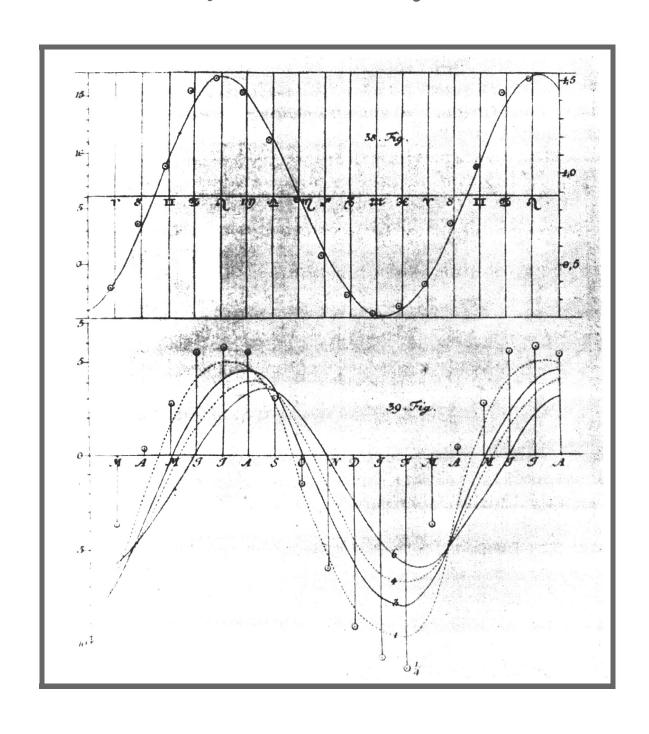

The Visual Display of Quantitative Information. Edward R. Tufte.

- By encoding information visually, they allow to present large amounts of numbers in a meaninful way.
- If well made, visualizations provide leads into the processes underlying the graphic.

Learning by seeing time...

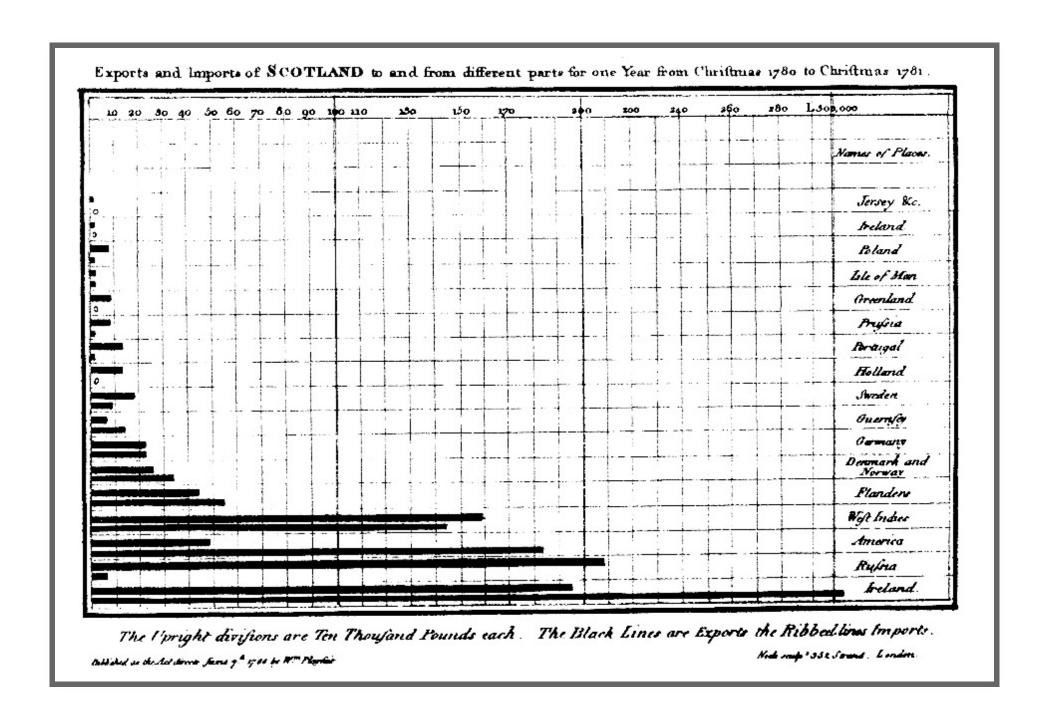

Time series

R. Tufte)

Geovisualization

Tufte (1983)

"The most extensive data maps [...] place millions of bits of information on a single page before our eyes. No other method for the display of statistical information is so powerful"

MacEachren (1994)

"Geographic visualization can be defined as the use of concrete visual representations --whether on paper or through computer displays or other media--to make spatial contexts and problems visible, so as to engage the most powerful human information processing abilities, those associated with vision."

GeoVisualization

- End goal is not to replace the human *in the loop*, but to **augment** her/him.
- Augmentation here comes through engaging the **pattern** recognition capabilities that our brain inherently has.
- Combines:
 - Traditional maps
 - Statistical maps
 - Statistical devices of other kind (charts, scatter plots, etc.)
- Different roles in the analysis process...

A map for everyone

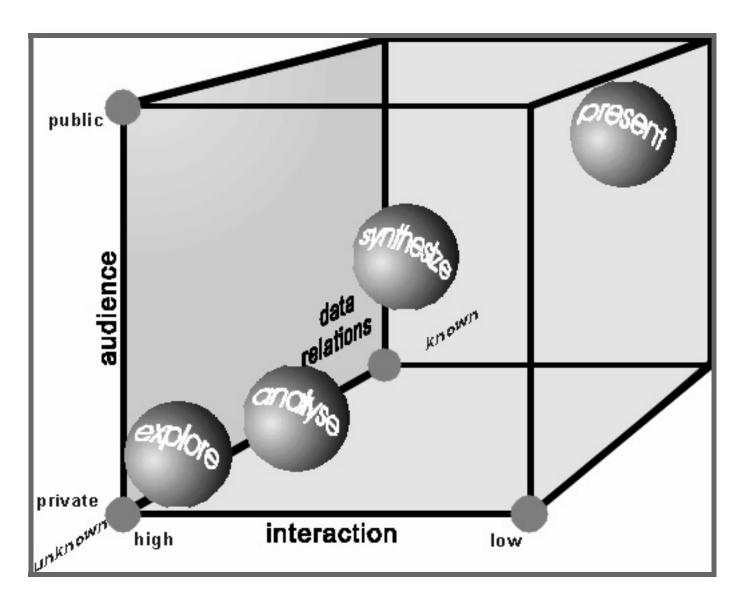

Maps can fulfill several needs

Depending on which one we want to stress, the best map will look very different

MacEachren & Kraak (1997) identify three main dimensions:

- Knowledge of what is being plotted
- Target audience
- Degree of interactivity

Dangers of GeoVisualization

--- Mark Monmonier -How to Lie with Maps Second Edition With a new Foreword by H. J. de Blij

The human brain is so good a picking up patterns...

The human brain is so good a picking up patterns...

... that it finds them even where they don't exist!

The human brain is so good a picking up patterns...

... that it finds them even where they don't exist!

Patternicity (Shermer, 2008) *The tendencey to find meaningful patterns in meaningless noise*

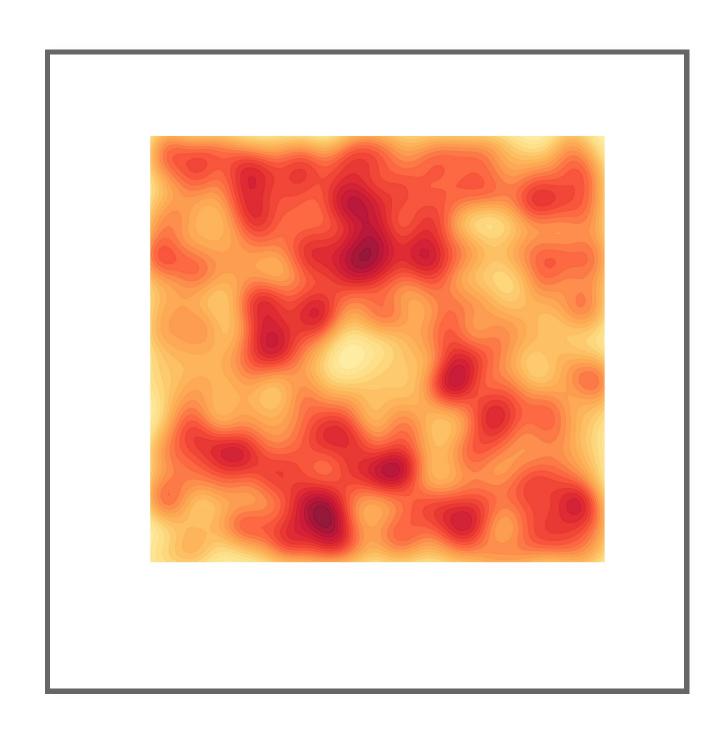

The human brain is so good a picking up patterns...

... that it finds them even where they don't exist!

Patternicity (Shermer, 2008) *The tendencey to find meaningful patterns in meaningless noise*

Apophenia (Konrad, 1958) *The experience of seeing patterns or connections in random or meaningless data*

Twitter clusters

How to be truthful with maps

"With great power comes great responsibility"

How to be truthful with maps

"With great power comes great responsibility" **Statistics** to the rescue!!!

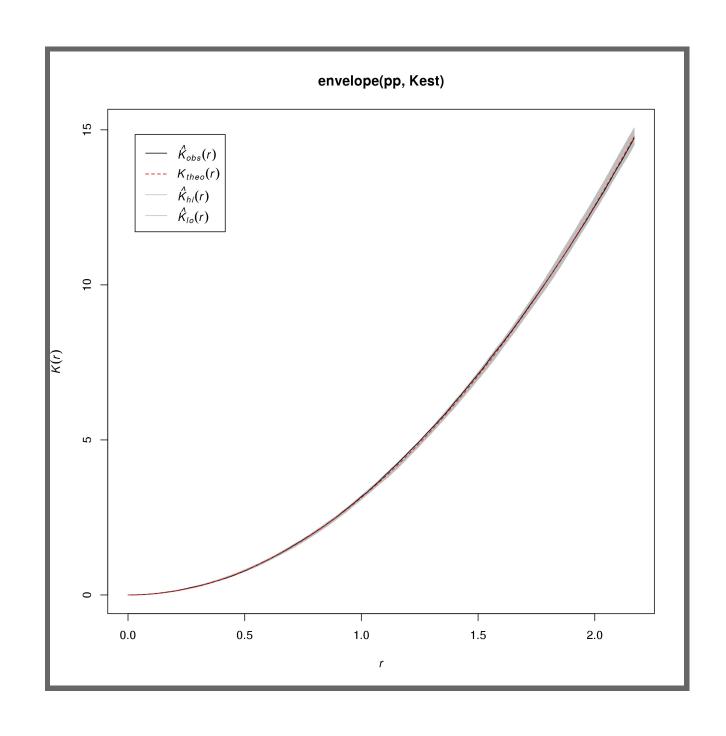

How to be truthful with maps

"With great power comes great responsibility"

Statistics to the rescue!!!

- Complement and enhance visuals
- Help disentangling **true** from **spurious** patterns (a.k.a. identifying the "Jesus on the toast")
- Reciprocity: GeoVis can also enhance statistics and make them more useful

Statistics for Twitter clusters

Recapitulation

- Visualization of statistical data is a fairly recent phenomenon.
- Its power comes from engaging and **augmenting** the human in the loop, rather than replacing her/him.
- Its power can be misused, but there are methods to limit this risk.
